OTHER: The business continuity plan is based on timely followed procedures and high availability configuration of equipment that have been set to practice since 1999. The high availability of the services provided to market participants is ensured by the proper design of the mission critical IT systems and the networking infrastructure (ATHEXnet) in high availability configuration (main + standby systems) in two different datacenters (primary / secondary site) in Athens. The aim of the aforementioned design is to be able to resume operations after a device failure using the redundant equipment in a maximum time of two (2) hours following service interruption. According to internal procedures the status of high availability configuration of IT systems and ATHEXnet is constantly checked every day in the primary and secondary site. The DR site of ATHEX is established in 2013, located away from the primary site and in a different earthquake and flood zone, with the capability to host adequate personnel to perform key operations for the period required to recover the main building and data centers from the disastrous incident. Moreover, ATHEXGroup has implemented an Active-Active architecture, that refers to a network of independent processing nodes, interconnected in a way to provide high availability of the offered technology services. The main purpose of an Active-Active cluster is to achieve load balancing, resulting the distribution of the workload across all nodes, with an effect of noticeable improvement in throughput and response times. Active-Active architecture offers, among others, a significant improvement of the availability of information systems, a reduction or elimination of interruptions in the provided technological services, as well as the provision of fast and reliable recovery in the event of an interruption of operation due to a disaster (Disaster Recovery mechanism). In the above context, the specific architecture has been implemented since the end of 2021 in the IT environment of the Athens S
of 2021. The upcoming rehearsal DR Test will be scheduled on last quarter of 2022. Moreover, from June 2014 ATHEXGroup have had their Business Continuity Management System accredited with ISO22301:2012 for all the companies of the group and the offered products and services.

AGC: 100 AGC members from time to time receive requests from their direct investor-clients for an informational copy of a CSD's completed questionnaire. Such requests typically lead to interactions between personnel at the CSD in question and member personnel or client personnel, or both. Those interactions take time and impose costs on both members and depositories. Do you approve of AGC members delivering a copy of your completed questionnaire to the member's direct client in response to the client's request?
