Macro moderation in 2022, yet dynamics remain intact for sustainable growth in the Greek economy

Inflation	1.2%	~6%	~2%
Residential real estate prices	7.1%	~6%	~6%

Growth prospects remain robust, despite the expected short-term impact of Russia-Ukraine war and inflation surge

Russia-Ukraine war & inflation surge impact on economic sentiment

- ✓ Following the deep recession of 9.0% in 2020, **real GDP increased by 8.3% in 2021**, putting the economy on course for sustainable recovery. Greek GDP 2021 growth rate was the 3rd higher in the Eurozone (5.4%)
- ✓ **Growth prospects of the Greek economy** are expected to remain highly positive, on the back of the pursued broad economic and institutional transformation, supported by the implementation of the Recovery and Resilience Facility (RRF)
- ✓ Similar to the COVID outbreak, the Russian-Ukraine war **will impact the economic sentiment in the short term**, nevertheless it remains above the respective long-term average (2008-2021) both in Greece and Euroarea
- ✓ The **main impact** of the Russian-Ukraine war is expected to come through the increase in global economic uncertainty and escalation of energy, food and commodity prices. **Inflation** is projected to increase by c.6% in 2022, including a c.5% impact from the energy and the geopolitical crises. In 2023, inflation is projected to de-escalate down to c.2%, as the double shock will gradually fade out
- ✓ Following the phasing out of measures against the pandemic and the de-escalation of fiscal support to mitigate the negative effects of the health crisis, **new one-off policy support measures** (fuel rebates, subsidies for electricity and natural gas bills and heating allowances) are expected to moderate the impact of inflation surge on households' and businesses' disposable income

+€85mn
vs bus.plan
