These Interim Financial Statements at 30.09.2006 have been approved for issue by the Board of Directors on 23.11.2006.

2. Summary of significant accounting policies

2.1 Basis of preparation of the financial statements

The accounting policies and methods of calculation applied for the interim financial statements are the same to those applied for the preparation of the audited annual financial statements for the years ended on 31 December 2005 (annual financial statements) besides the accounting policies mentioned below.

In the year 2003 and 2004 the International Accounting Standards Board (IASB) issued a series of new International Financial Reporting Standards (IFRS) and revised the International Accounting Standards (IAS), which in combination with the existing un-revised standards issued by the International Accounting Standards Committee (IASC – International Accounting Standards Board IASB), are referred to as “The IFRS Stable Platform 2005”.

The Group adopts “The IFRS Stable Platform 2005” from 1 January 2005.

Adoption of IAS No. 1 (Revised 2003)

The application of the IAS 1 (revised 2003) lead to the reform of the presentation of the financial statements. The minority interests are presented henceforth in a separate row in the items of the Net Equity. Profit and loss attributable to the minority shareholders and those attributable to the Company’s equity holders are presented henceforth as allocation of the net result for the period.

The preparation of financial statements in conformity with IFRS requires the use of certain critical accounting estimates and exercise of judgement in the process of applying the following accounting policies.

The financial statements of the parent company and its subsidiaries have been prepared under the historical cost convention, besides land and buildings, which have been measured at fair value and are analytically described below.

2.2 Consolidation

Subsidiaries

An audit is achieved over which the Company has the power to govern the financial and operating policies of another entity with the intention of gain from its activities.

The consolidated financial statements comprise the financial statements of the company as well as the entities audited by the company (its subsidiaries) at 30 September 2006.

The financial statements of the subsidiaries have been changed where necessary to ensure consistency with the policies adopted by the Group.

Inter-company transactions, balances, income and expenses are eliminated at consolidation.

2.3 Segment reporting

A business segment is a group of assets and operations engaged in providing products and services that are subject to risks and returns that are different from those of other business segments. The Group of companies IASO provides exclusive health services, which comprise of hospital, diagnostic, therapeutic and research activities, which are included in the classification code STAKOD 851.1 (Hospital activities).

2.4 Foreign currency conversion

Functional and presentation currency

Items included in the financial statements of the Group's companies, are presented in their financial environment's currency, where every company operates (official currency). The consolidated financial statements are presented in euro, which is the official currency adopted by the Group's companies.

2.5 Property, plant and equipment

Property, plant and equipment, excluding the productive property, are shown at cost less the accumulated depreciation and impairment losses. Cost includes all directly attributable expenditure for the acquisition of the items.

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably. All repairs and maintenance are charged to the income statement during the financial period in which they are incurred.

Productive property is shown at fair value, based on valuations by independent evaluators, less subsequent accumulative depreciation and impairment losses. The property is revaluated at regular time intervals so that the carrying amounts do not differ from the fair values at the balance sheet closing dates.

Increases in the carrying amount arising on revaluation of fair value are credited to reserves in shareholders' equity, unless they concern devaluation of a specific property

that had been recognised in expenses. In this case equal in amount part of revaluation is recognised in income.

Decreases in the carrying amounts arising from the revaluation, are recognised in expenses after firstly writing down the set up revaluation reserve for the specific asset.

The difference between depreciation based on the revaluated carrying amount of the asset charged to the income statement and depreciation based on the asset's original cost is transferred from fair value reserve to retained earnings.

Gains and losses on disposals are determined by comparing proceeds with carrying amount. These are included in the income statement. When revaluated assets are sold, the amounts included in other reserves are transferred to retained earnings.

The assets' residual values and useful lives are reviewed if appropriate, at the Management's judgement.

An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is greater than its estimated recoverable amount. Land is not depreciated. Depreciation on other assets is calculated using the straight-line method to allocate their cost or revaluated amounts to their residual values over their estimated useful lives, as follows:

PROPERTY, PLANT AND EQUIPMENT	YEARS
Buildings (Main building of Maternity Clinic)	40-50
Machinery	5-30
Wireless communication network	30
High-tech machinery	5
Medium technology machinery	14
Special machinery	20
Vehicles	5-7
Passenger vehicles & motorcycles	5
Lorries	7
Other equipment	3-20
Furniture	20
Utensils	15
Office machines	10
Computers & electronic complexes	5
Telecommunication equipment	3

The productive property or those assets that their use has not yet been determined and are still at construction stage, are shown at cost less any impairment losses. The cost includes professional fees and borrowing costs. The depreciation of this property as well as of the Group's commences when the property is ready for use.

2.6 Intangible assets

Trademarks and licences

Trademarks and licences are carried at cost less accumulated amortization. Amortization is calculated using the straight-line method over their estimated, useful lives as follows:

Production and exploitation licences

Licence for exploitation of IASO General Clinic	50 years
Purchase of IASO trademark	20 years

Computer software – other intangible assets

Acquired computer software licences are measured at acquisition cost less amortization. The amortization is carried out on a straight-line basis over their estimated useful lives which is as follows:

SAP R3 (the basic business computer software)	10 years
LIS (Central laboratory programme)	5 years
RIS (Radiology software support)	5 years
ASTRAIA (Embryonic software support)	5 years
MUSE, QA (Cardiology department)	5 years
MS OFFICE, WINDOWS 2000,XP,MS,MONEY	3 years

Costs associated with developing and maintaining computer software programmes are recognised as an expense when incurred.

2.7 Construction contracts

The construction projects of the Group are auctioned, and then having carried out negotiations with the tenderers, the one with the lowest price wins the contract. The contracts prior to their signing are examined by the Legal, the Finance and the New Projects Department, then they are approved by the Board of Directors and are signed by the authorized members. The supervision and audit of the contracts' completion is done by the Finance and New Projects Departments.

2.8 Investments

Available-for-sale financial assets

Available-for-sale financial assets are non-derivatives.

In particular it concerns Mutual fund Units "MIDCAP PRIVATE SECTOR 50" - EUROBANK and "shares of unlisted Companies".

The fair values of shares listed in Official Capital Markets are based on current bid prices at balance sheet closing dates. If the market for a financial asset is not active, the Group establishes fair value by using valuation techniques, at balance sheet closing dates.

2.9 Inventories

The inventories are reported at the lower value between the cost and the net realisable value. Cost is determined using the weighted average cost formula.

Net realisable value is the estimated selling price of the inventories in the ordinary course of business of the Group companies.

2.10 Trade receivables

Trade receivables are recognised at their actual value less impairment losses (loss from doubtful receivables).

The amount of the provision is recognised in the income statement.

2.11 Cash and cash equivalents

Cash and cash equivalents include cash in hand and time deposits of low risk.

2.12 Share capital

Ordinary shares are classified as equity.

Incremental costs directly attributable to the issue of new shares or options are shown in equity as a deduction, net of tax, from the proceeds. Expenses related to the issue of shares for acquisition of enterprises are included in cost of the enterprise that is acquired. Where any Group company purchases the Company's equity share capital (treasury shares), the consideration paid, including any directly attributable incremental costs, is deducted from equity attributable to the Company's equity holders until the shares are cancelled, reissued or disposed off. Every gain or loss from sale of treasury shares net of other direct transaction expenses & taxes, if applicable, is shown as a reserve in equity.

2.13 Borrowings

Borrowings are recognised at their value, reduced by any transaction costs.

The fair value of the liability portion of a convertible bond is determined using a market interest rate for an equivalent non-convertible bond. This amount is recorded as a liability on an amortised cost basis until extinguished on conversion or maturity of the bonds.

2.14 Deferred income tax

Deferred income tax is determined using the liability method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts.

Deferred income tax is determined using tax rates that have been enacted by the balance sheet date.

Deferred income tax assets are recognised to the extent that is probable that future taxable profit will be available against which the temporary differences can be utilised.

2.15 Employee benefits

Short-term benefits

Short-term employee benefits towards the employees in money and in kind are recognised as an expense when accrued.

Pension obligations

The liability recorded in the balance sheet in respect of defined benefit pension plans is the present value of the defined benefit obligation for the defined benefit less the fair value of the assets of the plan and the changes occurring from other actuarial gains or losses and past service costs. The defined benefit obligation is calculated annually by independent actuaries using the projected unit credit method. The present value of the defined benefit obligation is determined by discounting the estimated future cash outflows using interest rates of high-quality corporate bonds that are denominated, in the currency in which the benefits will be paid, and that have terms to maturity approximating to the terms of the related pension liability.

Past-service costs are recognised immediately in income, unless the changes to the pension plan are conditional on the employees remaining in service for a specified period of time (the vesting period). In this case, the past-service costs are amortised on a straight-line basis over the vesting period. Termination benefits are payable when employment is terminated before the normal retirement date. The Group recognises termination benefits when it is demonstrably committed. Benefits following due more than 12 months after the balance sheet date are discounted to present value.

2.16 Provisions

Provisions are recognised when the Group has a present legal or constructive obligation as a result of past events, it is more likely than not that be required to settle the obligation.

2.17 Revenue recognition

Revenue is measured at fair value of the sale of goods and services, net of value-added tax, rebates and discounts and after eliminating sales within the Group. Revenue is recognised as follows:

Sales of services

Sales of services are recognised in the accounting period (invoices & with provision) in which the services are rendered.

Sales of goods

Sales of goods are recognised when a Group entity has delivered products to the customer, the customer has accepted the products and collectibility of the related receivables is reasonably assured.

Interest income

Interest income is recognised on a time-proportion basis using the effective interest method.

Dividend income

Dividend income is recognised when the right to receive payment is established.

2.18 Leases

Leases where the lessor retains substantially all the risks and rewards of ownership are classified as operating leases.

Lessor

Rental income is recognised on a straight-line basis over the lease term.

Lessee

Payments made under operating leases are charged to the income statement on a straight-line basis over the period of the lease.

2.19 Dividend Distribution

Dividend distribution to the Company's shareholders is recognised as a liability in the consolidated financial statements in the period in which the dividends are approved by the Company's shareholders.

2.20 Government grants

Government grants for training staff after they are certified and settled by the competent Government body (Ministry of Labour – OAED [Manpower, Employment Organisation]) are recognised in income (provision).

Government grants relating to assets are recognised in liabilities (current or non-current) as grants for PPE and are credited to the income statement according to the respective assets useful life.

3. Financial risk management

3.1 Fair value estimation

The fair value of financial instruments traded in active markets (stock exchange) is based on quoted market prices at the annual balance sheet or the balance sheet of the period.

The fair value of financial instruments that are not traded in an active market is determined at historical cost (acquisition cost) at the balance sheet date.

The nominal value less estimated credit adjustment of trade receivables and payables are assumed to approximate their fair values.

4. Critical accounting estimates and judgements

Estimates and judgements are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

4.1 Critical accounting estimates and assumptions

The Group makes estimates and assumptions concerning the future. The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are discussed below:

Income taxes

The Group is subject to uniform income tax rate given that all Group companies activate in Greece.

5. Information by Business Unit

The following information refers to the business units of the Group's companies, which should be reported individually in the financial statements.

The business units have been defined based on the Group's companies structure considering also the fact that the decision-makers monitor their financial information individually, as presented by the company for each of its subsidiaries included in the consolidation.

Using the quantitative criteria set by the relevant IFR standard, IASO S.A. and its subsidiaries were set as business units that must be reported individually in the financial statements.

The accounting principles are the same with the ones used at the Annual Financial Statements and consist of independent units – companies.

The Management evaluates the performance of these business units, based on the operating and the net profits, as well as the potential synergies between the business units and the complement of services in the whole spectrum of health services in the human life-cycle.

The parent company "IASO S.A" activates in the health care sector, covering all the obstetrics and gynecology cases and a broad range of diagnostic and therapeutic services. Its operations, in short, can be classified to inpatients cases (obstetrics and surgical) and outpatients cases (diagnostic laboratories and outpatients departments).

The subsidiary company "IASO GENERAL CLINIC OF HOLARGOS S.A." activates also in the health care sector, as a general hospital, covering all surgical and non-surgical cases with the exception of the obstetrics and gynecology related cases. It also operates complete and fully organized diagnostic laboratories, outpatient departments and emergency units. Its operation can be classified by nature to inpatient cases (surgical, non-surgical) that require hospitalization and outpatients cases (in diagnostic laboratories, outpatient departments) that do not require patient hospitalization.

The subsidiary company "MEDSTEM SERVICES S.A." activates mainly in the healthcare supporting services, with its main objective, from 01.01.2006 being the

processing and storage of infant stem cells. In addition to the aforementioned provision of health services, it also operates in parallel non-medical services that at the moment are not considered important due to their small contribution to the group's total revenue. These services where necessary will be mentioned totally as "Other services provided".

The Group's other subsidiaries are either in a construction stage or have not commenced productive activity yet and lack any revenues. However, due to the reconciliation of operating and net profits in a consolidated base they will be presented individually by the title "Other companies".

The financial data according to the Group's Business Units and the proof with the consolidated data are presented as follows:

8. Inter-company transactions

The participations of the parent or the subsidiaries in other Group companies, which are unlisted on the ATHEX, were measured at their acquisition costs, a method which will be followed by consistent practice by the Group Companies.

The financial statements of the subsidiaries are adjusted appropriately, so that they are prepared based on the accounting policies of the Group.

The participations, inter-company transactions, balances and income and expenses are eliminated upon consolidation.

The arising initial surplus (initial consolidation difference) during the consolidation of the Group companies, has been included in the Group's income statement.
