Start of commercial operation of photovoltaic parks in Romania

HELLENiQ ENERGY Holdings (the “Company”) announces that the delivery and start of commercial operations for two photovoltaic parks in southern Romania, with a total capacity of 58 MW, have been successfully concluded, in accordance with an agreement signed in 2023 with METLEN for the construction and acquisition of four photovoltaic parks with a total capacity of 211 MW. The delivery and start of operations of the remaining two projects, with a total capacity of 153 MW, are expected within 2026.

With this development, HELLENiQ ENERGY Group’s (the “Group”) total RES portfolio capacity in Romania now exceeds 850 MW, strengthening the Group’s position in a growing market and accelerating the international diversification of its portfolio. This portfolio includes a balanced mix of technologies (photovoltaic and wind projects, complemented by the addition of energy storage systems), which strengthens both the flexibility and resilience of the regional energy system.

The total installed capacity of the Group’s RES projects currently in operation amounts to 564 MW across four countries in Southeastern Europe (Greece, Cyprus, Republic of North Macedonia, and Romania).
